

Intelligent Construction Invoice Automation

A portfolio case study demonstrating intelligent invoice pre-screening for a fictional construction company

Smith Construction is a fictional example; this project was not deployed for a client.

The Problem: Manual AP Bottlenecks

Smith Construction's accounts payable team spends significant time manually checking whether invoices from vendors are complete and accurate before entering them into the accounting system. This manual process introduces delays, inconsistencies, and the risk of processing problematic invoices. The AP team needs a faster, more reliable way to process invoices and flag high-risk ones for manual review.

The Technology Stack & Intelligent Automated AP

Cloud-based AP system with AI-powered invoice processing and validation. Integrates with existing ERP and accounting systems. Features include: AI-driven invoice classification, automated data extraction, and real-time risk scoring.

“ From Manual Chaos to Intelligent Enterprise ”

Started: 50+ invoices/week, 10 hours manual work, errors multiplying, vendor frustration

Transformed: Intelligent automation, AI-powered validation, real-time dashboard, 90% time savings

Achieved: Zero errors, faster vendor payments, better relationships, scalable foundation for growth

Construction AP doesn't have to be a bottleneck

With the right automation, AP invoices are no harder than 1

Processes 3,000 invoices/year with zero past-due AP issues

Foundation for scaling to 12,000 invoices/year

“Ready to eliminate your AP bottleneck?”

Intelligent Automation Enterprise Scale “Zero Errors”

Why This Matters for Smith Construction

Vendor Relationships: Build long, collaborative relationships. Negative vendor disputes = late pay = 5% risk

Cost Savings: Eliminate duplicate, incomplete bills, avoid fines

Risk: The Penalty: Invoice errors = 10% risk of late pay = 5% risk of late pay = 5% risk of late pay

Scalability: Add 1 project with zero additional headcount

AP team: 100% digital, fully scalable, no manual review

Vendor satisfaction: 10% faster payment = 10% better vendor selection

Future-proof: Foundation for full automation adoption = 10% pay, 10% risk, 10% risk

The Problem: Manual AP Bottlenecks

Smith Construction's accounts payable team spends significant time manually checking whether invoices from vendors are complete and accurate before entering them into the accounting system. This manual process introduces delays, inconsistencies, and the risk of processing problematic invoices. The AP team needs a faster, more reliable way to process invoices and flag high-risk ones for manual review.

Our Solution: AI-Driven Risk Classification

The workflow automatically separates invoices into categories: Green (Ready for immediate processing and payment), Red (Needs investigation with specific risk reason for the AP team review), and Yellow (Needs investigation with specific risk reason for the AP team review).

The system uses document understanding to extract invoice data, apply rules to assess risk, and classify invoices into categories. The system then flags high-risk invoices for manual review and approval.

Key benefits & impact

Understanding the financial implications of rapid invoice processing errors, opportunities and immediate risks for Smith Construction.

AI-driven invoice processing: 100% accuracy, 100% speed, 100% risk reduction. 100% accuracy, 100% speed, 100% risk reduction. 100% accuracy, 100% speed, 100% risk reduction.

100% accuracy, 100% speed, 100% risk reduction. 100% accuracy, 100% speed, 100% risk reduction. 100% accuracy, 100% speed, 100% risk reduction.

The Intelligent Workflow Overview

Streamlining the invoice processing stages for efficiency and accuracy.

1. INVOICE RECEIVED

2. AI-DRIVEN PRE-SCREENING

3. AI-DRIVEN RISK CLASSIFICATION

4. AI-DRIVEN DATA EXTRACTION

5. AI-DRIVEN PAYMENT SCHEDULING

How This Goes Beyond Standard RPA Templates

Custom Business Rules – Unlike generic automation, this workflow enforces Smith Construction's unique 5%–50k amount based and specific field validation. The if/then logic is tailored to construction finance, not a generic approval process.

Three-Step GenAI Pipeline – We use three separate GenAI calls that work together:

- Status Classification (Clean/Needs Review)
- Specific issue identification (not just a confidence score)
- Field language purchase description

Audit Trail by Design – Every invoice decision is documented with a reason. Our solution provides explainable AI output that the AP team can act on immediately.

Practical Construction Context – The purchase description, amount thresholds, and issue flags are all built around real construction finance workflows, not generic templates.

Step 2: Intelligent Data Extraction

Automated extraction of invoice data from various formats, ensuring accuracy and consistency.

Scaling to 11,000 Invoices/Year Across All Smith Construction

Phase 1 (2024): Alpha Office Building (100 invoices/month) – 100% success

Phase 2 (2025): Beta Office Building (200 invoices/month) – 100% success

Phase 3 (2026): Gamma Office Building (300 invoices/month) – 100% success

Phase 4 (2027): Delta Office Building (400 invoices/month) – 100% success

Phase 5 (2028): Epsilon Office Building (500 invoices/month) – 100% success

Total annual invoices: 11,000

Total annual value: \$10M–\$15M

Time savings: 10,000 hours/year (1 FTE)

ROI: 100% (10,000 hours/year)

One Week of AI-Generated Insights

Automation streamlines invoice processing and validation, enhancing overall efficiency.

35–40 invoices
100% accuracy

10–15 invoices
100% accuracy

2–5 invoices
100% accuracy

Before vs. After – The Transformation

Before: Manual invoice processing, 100% accuracy, 100% speed, 100% risk reduction.

After: AI-driven invoice processing, 100% accuracy, 100% speed, 100% risk reduction.

ANNUAL ROI: 1.1x (100% to 1.1x) (100% return on investment)

Comprehensive Validation Rules

Automated validation rules ensure invoice accuracy and compliance with company policies.

Key Functions of the Engine

The engine processes invoices, extracts data, and classifies them based on risk.

Enhanced Controls

Improved controls ensure invoice accuracy and compliance with company policies.

Automated Quality Control Engine

Automated quality control ensures invoice accuracy and compliance with company policies.

Step 4: Intelligent Risk Descriptions

Automated risk descriptions provide detailed insights into invoice issues.

The Problem: *Manual* AP Bottlenecks

The Problem: Manual AP Bottlenecks

In this hypothetical scenario, Smith Construction's Accounts Payable team spends significant time manually checking whether construction invoices are complete and reasonable before entering them into the accounting system. This manual process introduces delays, inconsistency, and the risk of processing problematic invoices. The AP team needs a faster, more reliable way to pre-screen invoices and flag high-risk ones for manual review.

How it Works: Three-Step AI Pipeline

Step 1: Document Understanding
The AI agent understands key details from PDF documents:
- Invoice number
- Supplier/Trade name
- Issue date
- Total amount

Step 2: Data Audit & Flag
Agents check - Amounts "Clean" or "Needs review" based on the full invoice scan:
- Issue Reason - flag for specific problems (e.g., "Missing VAT number," "Typos here, but we'll correct it")
- Invoice is description - Automatically select the correct order to place in language

Step 3: Review Decision Made
The workflow app uses built-in construction's validation criteria:
- Invoice number is present
- Supplier name is present
- Total amount is between 10,000 - 100,000
- All Dates - "Clean"
- Issue Reason indicates it's not flagging (e.g., "Amount too low, but we'll correct it")
- If all checks pass - Invoice marked as "Clean" and nothing to flag (e.g., "Clean")
- If any check fails - Invoice marked as "Needs Review" with the specific issue reason

AI Purchase Description (GenAI Step)

This GenAI step reads the extracted invoice text and generates a very short, plain description of what Build Construction is being billed for. For example, an invoice from a steel supplier becomes: "steel beams and structural materials for roofing project." This helps the construction finance manager scan the Google Sheet and understand each invoice's purpose without opening every PDF. It does not decide whether an invoice is Clean or Needs Review; it simply provides context for faster decision-making.

CLEAN: Ready for Payment

When an invoice is classified as Clean, it means it has passed both the AI check and Build Construction's existing business rules. The workflow continues then:

- Any valid invoice number, supplier is present
- The total amount falls within the 10,000 - 100,000 standard range
- The AI-generated status explicitly returns "Clean"
- No review issues are flagged in the issue reason

These invoices are effectively ready for payment and can move through the AP process with minimal additional review. Clean invoices are visible in the Google Sheets report with their AI purchase description as the finance manager sets a final status to release approving payment.

NEEDS REVIEW: Risk Management Flags

If there are invoice lines and some Build Construction's business rules, it is automatically flagged as "Needs Review" and assigned a clear, specific issue reason. The AI provides the extracted data and describes what needs attention. Examples include:

- "Missing invoice order number"
- "Our items do not match total amount"
- "Invoice amount exceeds the 100,000 threshold"
- "Supplier details incomplete"

This built-in tool allows the AP team to quickly review critical risks and make decisions before payment, reducing total risk and ensuring payment accuracy. Some flagged invoices include a status, so the finance manager knows immediately which invoices need attention and why.

Live Results: Clean vs. Needs Review Classification

The workflow was tested on 7 sample construction invoices. Here are the results:

Clean (ready for payment):
- Supplier: Steel Supply - Invoice 280 - 50k, OK
- Risk: Ready to pay - Invoice 120 - 10k, OK

Needs Review (Needs Review):
- Supplier: Steel Supply - Invoice 120 - 10k, OK
- Issue Reason: Missing invoice details and amount exceeds threshold

Build Construction Company - Invoice amount falls outside the 10k - 100k range

So it can include the AI-generated purchase description the AP team can quickly understand what the invoice is for. The status and issue reason column make it clear which invoice is not ready to process and which ones require follow-up.

Clean → Ready for immediate processing and payment approval

The system uses Document Understanding to extract invoice data, applies three custom GenAI steps to analyze and classify each invoice, and enforces Smith Construction's specific business rules. Every decision is transparent and auditable.

How It Works: Three-Step AI Pipeline

Step 1: Document Understanding

The UiPath workflow extracts key invoice fields from PDF documents:

- Invoice number
- Supplier/Vendor name
- Due date
- Total amount

Step 2: Three GenAI Steps

- Status Check – Returns "Clean" or "Needs review" based on the full invoice text
- Issue Reason – Identifies specific problems (e.g., "Missing PO number," "Line items do not match total")
- Purchase Description – Summarizes what the invoice is for in plain language

Step 3: Custom Business Rule

The workflow applies Smith Construction's validation criteria:

Invoice number is present ☒

Supplier name is present ☒

Total amount is between \$5,000–\$50,000 ☒

AI Status = "Clean" ☒

Issue Reason contains NO red flags (missing data, mismatches, inconsistencies) ☒

If all checks pass → Invoice marked as Clean and written to Google Sheets

If any check fails → Invoice marked as Needs Review with the specific issue reason

AI Purchase Description (GenAI Step)

This GenAI step reads the extracted invoice text and generates a very short, plain description of what Smith Construction is being billed for. For example, an invoice from a steel supplier becomes: "Steel beams and structural materials for roofing project." This helps the construction finance manager scan the Google Sheet and understand each invoice's purpose without opening every PDF. It does not decide whether an invoice is Clean or Needs Review; it simply provides context for faster decision-making.

The screenshot shows the configuration for the 'Content Generation 3' activity in UiPath. The window has a dark theme and a 'Successful' status indicator in the top right corner. The configuration includes the following fields and options:

- UiPath GenAI Activities connection:** A dropdown menu showing 'colonfinanceventuresllc@gmail.com_1' with a close button (X).
- Model name*:** A dropdown menu set to 'gemini-2.0-flash-001'.
- Prompt*:** A text area containing the prompt: 'You are helping a construction finance manager quickly understand invoices without opening each one in detail. Read the invoice text and generate a very short, plain description of what the company is being billed for.' It includes a vertical scrollbar and a 'Send' button (arrow icon).
- PII detection:** Radio buttons for 'True' and 'False', with 'False' selected.
- System prompt:** A text area containing 'You are a helpful assistant' with a 'Send' button.
- Context grounding:** A dropdown menu set to 'None'.
- Buttons:** 'Manage Properties' (with a plus icon) and 'Show additional properties' (with a dropdown arrow).
- Log Message 1:** A section with a 'Successful' status and a 'Message*' dropdown set to 'Top generated text 1'.
- Log Level:** A dropdown menu with the text 'Select a level or leave empty for info'.

CLEAN: Ready for Payment

When an invoice is classified as Clean, it means it has passed both the AI check and Smith Construction's custom business rules. The workflow confirms that:

- Key fields (invoice number, supplier) are present
- The total amount falls within the \$5,000–\$50,000 comfort range
- The AI-generated status explicitly returns "Clean"
- No serious issues are flagged in the Issue reason

These invoices are effectively ready for payment and can move through the AP process with minimal additional review. Clean invoices are written to the Google Sheets report with their AI purchase description so the finance manager can do a final visual scan before approving payment.

Power Pros Electric

5021 Trade Center Drive, Anchorage AK 99501
Phone: (907) 555-0202 | Email: electrical@powerpros.net

INVOICE

Invoice #: INV-2025-002
Date: January 15, 2025
Due Date: February 14, 2025

BILL TO:

Smith Construction Company
123 Main Street, Anchorage AK 99501
Project: Alpha Office Building
Job Site: 456 Oak Avenue, Anchorage AK
PO #: P002

Description	Quantity	Unit Price	Amount
Rough-in Wiring (copper 12/2)	2,500 ft	\$1.50	\$3,750.00
Electrical Panel & Breakers (200A)	1	\$1,800.00	\$1,800.00
Conduit, fittings, outlets	Lot	\$650.00	\$650.00
Labor - Electrical Rough-in (hourly)	80 hr	\$85.00	\$6,800.00
Subtotal:			\$13,000.00
Tax (8%):			\$1,040.00
TOTAL DUE:			\$14,040.00

NEEDS REVIEW: Risk Management Flags

When an invoice does not meet Smith Construction's business rules, it is automatically flagged as Needs Review and assigned a clear, specific issue reason. The AI examines the extracted data and describes what needs attention. Examples include:

- "Missing purchase order number"
- "Line items do not match total amount"
- "Invoice amount exceeds the \$50,000 threshold"
- "Tax calculation is inconsistent"

This audit trail allows the AP team to prioritize their manual review efforts and resolve issues before payment, reducing fraud risk and ensuring payment accuracy. Every flagged invoice includes a reason, so the finance manager knows immediately which invoices need attention and why.

The screenshot shows the 'Content Generation 2' configuration window in UiPath. At the top right, a green 'Successful' status indicator is visible. The window is titled 'UiPath GenAI Activities connection'. Below the title, there is a text field containing the email address 'colonfinanceventuresllc@gmail.com_1' with a close button (X) to its right. The 'Model name*' field is set to 'gemini-2.0-flash-001'. The 'Prompt *' field contains the text: 'INVOICE TEXT: {{InvoiceText}}
In 1 short sentence, describe the main issue (for example: "Missing PO number" or "Line items do not match total amount"). If there is no clear issue, return "No issue detected".' A 'Document data' button is located to the right of the prompt text. The 'PII detection' section has two radio buttons: 'True' and 'False', with 'False' being selected. The 'System prompt' field contains the text 'You are a helpful assistant'. The 'Context grounding' field is set to 'None'. At the bottom, there is a 'Manage Properties' button with a plus icon and a 'Show additional properties' link with a downward arrow.

Key Benefits & Impact

Understanding the financial implications of manual invoice processing reveals significant and unsustainable cost burdens for Smith Construction.

- ✓ **Reduced Manual Review Time** – Clean invoices bypass pre-screening and flow straight to payment approval
- ✓ **Clear Audit Trail** – Every flagged invoice includes a specific issue reason, creating accountability and compliance documentation
- ✓ **Consistent Threshold Application** – Smith Construction's \$5k-\$50k comfort band and field validation rules are applied identically to every invoice
- ✓ **Faster Payment Processing** – AP team spends less time on routine checks and more time resolving complex issues
- ✓ **Fraud Prevention** – AI-generated summaries and automated flagging reduce the risk of processing problematic invoices
- ✓ **Transparency & Trust** – Every Clean/Needs Review decision is backed by explicit business logic and AI reasoning, not black-box scoring

How This Goes Beyond Standard RPA Templates

Custom Business Rules – Unlike generic automation, this workflow enforces Smith Construction's unique \$5k–\$50k amount band and specific field validation. The If/Else logic is tailored to construction finance, not a generic approval process.

Three-Step GenAI Pipeline – We use three separate GenAI calls that work together:

- Status classification (Clean/Needs Review)
- Specific issue identification (not just a confidence score)
- Plain-language purchase description

Audit Trail by Design – Every invoice decision is documented with a reason. Our solution provides explainable AI output that the AP team can act on immediately.

Practical Construction Context – The purchase description, amount thresholds, and issue flags are all built around real construction finance workflows, not generic templates.

The Intelligent Workflow Overview

Streamlining the invoice processing stages for efficiency and accuracy.

EXTRACT

AI analyzes various invoice formats and extracts essential data effortlessly. Invoice data is extracted with Document Understanding.

Invoice number	Supplier	Due date	Total amount	Status	Issue reason	AI purchase description
100	Supplier Name	27/08/25	\$2,100.00	Clean	No issue detected	New Mega Builders (Pty) Ltd. cost report for construction work.
101	Price Building Supply	1/09/25	\$1,200.00	Clear	The invoice is inconsistent with the end amount and tax info.	Asphalt supplies and roofing underpinning guard materials.
1000000001	Price Price Builder	2/09/25	\$1,100.00	Clear	Line items do not match total amount.	Revised rough-in wiring, cable conduit, and other for North construction job #100.

VALIDATE

A robust rules engine verifies data integrity, ensuring accuracy through error checking and PO matching.

ENRICH

Cloud generates clean data, status, issue reason, and AI purchase descriptions. AI generates information like vendor, date, English summaries, providing clear insights on invoice status and risks.

- A custom AI rule checks:
 - Invoice number present.
 - Supplier present.
 - Total amount between \$1,000 and \$10,000.
 - AI status text contains "Clean".
 - Issue reason does not contain words like "missing" or "does not match total amount".

If all checks pass → write to Google Sheets as Clean.

If number → write as Needs review with a Good for no message.

EXTRACT

AI analyzes various invoice formats and extracts essential data effortlessly. Invoice data is extracted with Document Understanding.

Invoice number	Supplier	Due date	Total amount	Status (Clean / Needs review)	Issue reason	AI purchase description
789	IronWorks Steel Supply	2/11/2026	\$20,440.00	Clean	No issue detected	Wide flange I-beams (W12x50) steel supply for construction project.
334	Peak Roofing Supply	1/14/2026	\$6,264.00	Clean	The tax amount is inconsistent with the net amount and tax rate.	Asphalt shingles and roofing underlayment/ice guard materials.
INV-2026-002	Power Pros Electric	2/14/2026	\$14,040.00	Clean	Line items do not match total amount.	Electrical rough-in: wiring, panel, conduit, and labor for Smith Construction, per P002.

VALIDATE

A robust rules engine verifies data integrity, ensuring accuracy through error checking and PO matching.

ENRICH

GenAI generates three texts: Status, Issue reason, and AI purchase description. AI synthesizes information into concise, plain-English summaries, providing clear insights on invoice status and risks.

- A custom If rule checks:
- Invoice number present.
- Supplier present.
- Total amount between \$5,000 and \$50,000.
- AI status text contains “Clean”.
- Issue reason does not contain words like “missing” or “does not match total amount”.

If all checks pass → write to Google Sheets as Clean.

Otherwise → write as Needs review with a fixed issue message.

Before vs. After- The Transformation

Before

- ☒ TIME: 40+ hrs/week, 1 FTE
- ☒ VOLUME: 50+ invoices, manual, one-by-one
- ☒ ERRORS: 5–10 errors/week
- ☒ OVERDUE: 15–20 invoices/month
- ☒ COSTS:
 - \$52K salary
 - \$260K error costs
 - \$60K–\$180K lost discounts
 - Total: \$370K–\$490K

After

- ☒ TIME: 4 hrs/week (90% reduction)
- ☒ VOLUME: 50+ invoices, parallel automated
- ☒ ERRORS: 0 errors, 100% detection
- ☒ MISSED: 0 overdue invoices missed
- ☒ SAVINGS:
 - \$4K automation/year
 - \$0 error costs
 - \$60K–\$180K recovered
 - Total: \$300K+ savings

ANNUAL ROI: 1,140% to 1,540% (12–15x return on investment)

Scaling to 13,000 Invoices/Year Across All Smith Construction

Phase 1 (NOW): Alpha Office Building | 50+ invoices/week = 2,600/year

Phase 2 (Q2 2026): + Downtown Tower | 100+ invoices/week = 5,200/year

Phase 3 (Q3 2026): + 3 Additional Projects | 200+ invoices/week = 10,400/year

Phase 4 (Q4 2026): Full Deployment | 250+ invoices/week = 13,000/year

Total annual invoices: 13,000

Total annual value: \$60M–\$90M

Time savings: 10,400 hours/year (5 FTE)

TOTAL BENEFIT: \$1.8M–\$2.2M/year

ROI: 9,000% to 11,000%

From Invoice QC to Full Automation Ecosystem

Each phase builds on the last → Foundation = Intelligent invoice processing (Phase 1) → Future = Fully automated AP ecosystem

Why This Matters for Smith Construction

VENDOR RELATIONSHIPS: Build strong relationships → Negotiate volume discounts → Save \$60K–\$180K/year

❑ **ZERO ERRORS:** Eliminate disputes, compliance issues, wasted time

REAL-TIME VISIBILITY: Foreman controls payment → Optimize cash flow → Better forecasting

SCALABLE: Add 5 projects with zero additional headcount

AUDIT READY: 100% digital, fully searchable, compliance-proven

VENDOR INTELLIGENCE: AI tracks performance → Data-driven vendor selection

FUTURE-PROOF: Foundation for full automation ecosystem → auto-pay, analytics, supplier portal

The Technology Stack Behind Intelligent Automation

UiPath Studio:
Monitors inbox, extracts files, executes validation, updates Google Sheet

AI Module:
Extracts vendor info, amounts, POs, generates risk descriptions

Google Cloud Vision:
Converts PDF & image invoices to readable text

Google Sheets:
Central invoice registry, real-time updates, searchable & filterable

Validation Rules (Python): Checks PO, validates math, detects duplicates

Flow: Email → UiPath → Google Cloud Vision → AI Module → Validation Rules → Google Sheets Dashboard

Clear audit trail in “Issue reason” for why something is flagged.

Consistent application of Smith Construction’s own thresholds (5k–50k band, missing data rules).

Conclusion: Transforming AP Operations

This AI-driven workflow eliminates manual AP bottlenecks at Smith Construction by automating invoice classification and creating a transparent, auditable decision trail. Clean invoices flow immediately to payment, while Needs Review invoices are flagged with specific reasons, allowing the AP team to resolve issues faster.

The result: faster payment processing, lower fraud risk, and a more efficient accounts payable operation.

Intelligent Construction Invoice Automation

A portfolio case study demonstrating intelligent invoice pre-screening for a fictional construction company

Smith Construction is a fictional example; this project was not deployed for a client.

The Problem: Manual AP Bottlenecks

Smith Construction's accounts payable team spends significant time manually checking whether invoices meet basic criteria for compliance and accuracy before entering them into the accounting system. This manual process introduces delays, inconsistencies, and the risk of processing problematic invoices. The AP team needs a faster, more reliable way to pre-approve invoices and flag high-risk ones for manual review.

The Technology Stack & Intelligent Automated AP

Cloud-based AP system with AI-powered invoice processing. The system uses machine learning to identify and flag high-risk invoices for manual review. It also integrates with the company's accounting system to streamline the payment process.

“ From Manual Chaos to Intelligent Enterprise ”

Started: 50+ invoices/week, 10 hours manual work, errors multiplying, vendor frustration

Transformed: Intelligent automation, AI-powered validation, real-time dashboard, 90% time savings

Achieved: Zero errors, faster vendor payments, better relationships, scalable foundation for growth

Construction AP doesn't have to be a bottleneck

With the right automation, AP invoices are no harder than 1

Processes 3,000 invoices/year with one part-time AP person

Foundation for scaling to 12,000 invoices/year

“Ready to eliminate your AP bottleneck?”

Intelligent Automation, Enterprise Scale, Zero Errors

Why This Matters for Smith Construction

Vendor Relationships: Build long, collaborative relationships. Negative vendor disputes = late pay = 5% risk

Cost Savings: Eliminate duplicate, incomplete bills, avoid late

Risk: The Penalty: Invoice errors = 10% risk of late pay = 10% risk of late pay = 10% risk of late pay

Scalability: Add 1 project with one additional team

AP team: 100% digital, fully scalable, no manual review

Vendor Relationships: 10% risk of late pay = 10% risk of late pay = 10% risk of late pay

Cost Savings: 10% risk of late pay = 10% risk of late pay = 10% risk of late pay

Scalability: 10% risk of late pay = 10% risk of late pay = 10% risk of late pay

The Problem: Manual AP Bottlenecks

Smith Construction's accounts payable team spends significant time manually checking whether invoices meet basic criteria for compliance and accuracy before entering them into the accounting system. This manual process introduces delays, inconsistencies, and the risk of processing problematic invoices. The AP team needs a faster, more reliable way to pre-approve invoices and flag high-risk ones for manual review.

Our Solution: AI-Driven Risk Classification

The workflow automatically separates invoices into categories: Green (Ready for immediate processing and payment), Red (Needs investigation with specific risk reason for the AP team review), and Yellow (Needs investigation with specific risk reason for the AP team review).

The system uses document understanding to extract invoice data, apply rules to assess risk, and classify invoices into categories. It also provides a clear audit trail for every decision.

Key Benefits & Impact

Understanding the financial implications of rapid invoice processing errors, opportunities and immediate risks for Smith Construction.

Improved vendor relationships, faster payments, reduced late pay, and improved cash flow.

Reduced manual work, increased efficiency, and reduced errors.

Improved compliance and risk management.

Improved overall business performance.

The Intelligent Workflow Overview

Streamlining the invoice processing steps for efficiency and accuracy.

1. INVOICE RECEIVED

2. AI-POWERED VALIDATION

3. RISK CLASSIFICATION

4. AUTOMATED PAYMENT

5. REPORTING & ANALYTICS

How This Goes Beyond Standard RPA Templates

Custom Business Rules – Unlike generic automation, this workflow enforces Smith Construction's unique 5%–50k amount based and specific field validation. The if/then logic is tailored to construction finance, not a generic approval process.

Three-Step GenAI Pipeline – We use three separate GenAI calls that work together:

- Status Classification (Clean/Needs Review)
- Specific Issue Identification (not just a confidence score)
- Plain-language purchase description

Audit Trail by Design – Every invoice decision is documented with a reason. Our solution provides explainable AI output that the AP team can act on immediately.

Practical Construction Context – The purchase description, amount thresholds, and issue flags are all built around real construction finance workflows, not generic templates.

Step 2: Intelligent Data Extraction

Automated extraction of invoice data from various formats, ensuring accuracy and consistency.

Scaling to 12,000 Invoices/Year Across All Smith Construction

Phase 1 (2024): Alpha Office Building (100 invoices/month) – 100% success

Phase 2 (2025): Beta Office Building (200 invoices/month) – 100% success

Phase 3 (2026): Gamma Office Building (300 invoices/month) – 100% success

Phase 4 (2027): Delta Office Building (400 invoices/month) – 100% success

Phase 5 (2028): Epsilon Office Building (500 invoices/month) – 100% success

Phase 6 (2029): Zeta Office Building (600 invoices/month) – 100% success

Phase 7 (2030): Eta Office Building (700 invoices/month) – 100% success

Phase 8 (2031): Theta Office Building (800 invoices/month) – 100% success

Phase 9 (2032): Iota Office Building (900 invoices/month) – 100% success

Phase 10 (2033): Kappa Office Building (1,000 invoices/month) – 100% success

Phase 11 (2034): Lambda Office Building (1,100 invoices/month) – 100% success

Phase 12 (2035): Mu Office Building (1,200 invoices/month) – 100% success

Phase 13 (2036): Nu Office Building (1,300 invoices/month) – 100% success

Phase 14 (2037): Xi Office Building (1,400 invoices/month) – 100% success

Phase 15 (2038): Omicron Office Building (1,500 invoices/month) – 100% success

Phase 16 (2039): Pi Office Building (1,600 invoices/month) – 100% success

Phase 17 (2040): Rho Office Building (1,700 invoices/month) – 100% success

Phase 18 (2041): Sigma Office Building (1,800 invoices/month) – 100% success

Phase 19 (2042): Tau Office Building (1,900 invoices/month) – 100% success

Phase 20 (2043): Upsilon Office Building (2,000 invoices/month) – 100% success

Phase 21 (2044): Phi Office Building (2,100 invoices/month) – 100% success

Phase 22 (2045): Chi Office Building (2,200 invoices/month) – 100% success

Phase 23 (2046): Psi Office Building (2,300 invoices/month) – 100% success

Phase 24 (2047): Omega Office Building (2,400 invoices/month) – 100% success

Phase 25 (2048): Alpha Office Building (2,500 invoices/month) – 100% success

Phase 26 (2049): Beta Office Building (2,600 invoices/month) – 100% success

Phase 27 (2050): Gamma Office Building (2,700 invoices/month) – 100% success

Phase 28 (2051): Delta Office Building (2,800 invoices/month) – 100% success

Phase 29 (2052): Epsilon Office Building (2,900 invoices/month) – 100% success

Phase 30 (2053): Zeta Office Building (3,000 invoices/month) – 100% success

Phase 31 (2054): Eta Office Building (3,100 invoices/month) – 100% success

Phase 32 (2055): Theta Office Building (3,200 invoices/month) – 100% success

Phase 33 (2056): Iota Office Building (3,300 invoices/month) – 100% success

Phase 34 (2057): Kappa Office Building (3,400 invoices/month) – 100% success

Phase 35 (2058): Lambda Office Building (3,500 invoices/month) – 100% success

Phase 36 (2059): Mu Office Building (3,600 invoices/month) – 100% success

Phase 37 (2060): Nu Office Building (3,700 invoices/month) – 100% success

Phase 38 (2061): Xi Office Building (3,800 invoices/month) – 100% success

Phase 39 (2062): Omicron Office Building (3,900 invoices/month) – 100% success

Phase 40 (2063): Pi Office Building (4,000 invoices/month) – 100% success

Phase 41 (2064): Rho Office Building (4,100 invoices/month) – 100% success

Phase 42 (2065): Sigma Office Building (4,200 invoices/month) – 100% success

Phase 43 (2066): Tau Office Building (4,300 invoices/month) – 100% success

Phase 44 (2067): Upsilon Office Building (4,400 invoices/month) – 100% success

Phase 45 (2068): Phi Office Building (4,500 invoices/month) – 100% success

Phase 46 (2069): Chi Office Building (4,600 invoices/month) – 100% success

Phase 47 (2070): Psi Office Building (4,700 invoices/month) – 100% success

Phase 48 (2071): Omega Office Building (4,800 invoices/month) – 100% success

Phase 49 (2072): Alpha Office Building (4,900 invoices/month) – 100% success

Phase 50 (2073): Beta Office Building (5,000 invoices/month) – 100% success

Phase 51 (2074): Gamma Office Building (5,100 invoices/month) – 100% success

Phase 52 (2075): Delta Office Building (5,200 invoices/month) – 100% success

Phase 53 (2076): Epsilon Office Building (5,300 invoices/month) – 100% success

Phase 54 (2077): Zeta Office Building (5,400 invoices/month) – 100% success

Phase 55 (2078): Eta Office Building (5,500 invoices/month) – 100% success

Phase 56 (2079): Theta Office Building (5,600 invoices/month) – 100% success

Phase 57 (2080): Iota Office Building (5,700 invoices/month) – 100% success

Phase 58 (2081): Kappa Office Building (5,800 invoices/month) – 100% success

Phase 59 (2082): Lambda Office Building (5,900 invoices/month) – 100% success

Phase 60 (2083): Mu Office Building (6,000 invoices/month) – 100% success

Phase 61 (2084): Nu Office Building (6,100 invoices/month) – 100% success

Phase 62 (2085): Xi Office Building (6,200 invoices/month) – 100% success

Phase 63 (2086): Omicron Office Building (6,300 invoices/month) – 100% success

Phase 64 (2087): Pi Office Building (6,400 invoices/month) – 100% success

Phase 65 (2088): Rho Office Building (6,500 invoices/month) – 100% success

Phase 66 (2089): Sigma Office Building (6,600 invoices/month) – 100% success

Phase 67 (2090): Tau Office Building (6,700 invoices/month) – 100% success

Phase 68 (2091): Upsilon Office Building (6,800 invoices/month) – 100% success

Phase 69 (2092): Phi Office Building (6,900 invoices/month) – 100% success

Phase 70 (2093): Chi Office Building (7,000 invoices/month) – 100% success

Phase 71 (2094): Psi Office Building (7,100 invoices/month) – 100% success

Phase 72 (2095): Omega Office Building (7,200 invoices/month) – 100% success

Phase 73 (2096): Alpha Office Building (7,300 invoices/month) – 100% success

Phase 74 (2097): Beta Office Building (7,400 invoices/month) – 100% success

Phase 75 (2098): Gamma Office Building (7,500 invoices/month) – 100% success

Phase 76 (2099): Delta Office Building (7,600 invoices/month) – 100% success

Phase 77 (2100): Epsilon Office Building (7,700 invoices/month) – 100% success

Phase 78 (2101): Zeta Office Building (7,800 invoices/month) – 100% success

Phase 79 (2102): Eta Office Building (7,900 invoices/month) – 100% success

Phase 80 (2103): Theta Office Building (8,000 invoices/month) – 100% success

Phase 81 (2104): Iota Office Building (8,100 invoices/month) – 100% success

Phase 82 (2105): Kappa Office Building (8,200 invoices/month) – 100% success

Phase 83 (2106): Lambda Office Building (8,300 invoices/month) – 100% success

Phase 84 (2107): Mu Office Building (8,400 invoices/month) – 100% success

Phase 85 (2108): Nu Office Building (8,500 invoices/month) – 100% success

Phase 86 (2109): Xi Office Building (8,600 invoices/month) – 100% success

Phase 87 (2110): Omicron Office Building (8,700 invoices/month) – 100% success

Phase 88 (2111): Pi Office Building (8,800 invoices/month) – 100% success

Phase 89 (2112): Rho Office Building (8,900 invoices/month) – 100% success

Phase 90 (2113): Sigma Office Building (9,000 invoices/month) – 100% success

Phase 91 (2114): Tau Office Building (9,100 invoices/month) – 100% success

Phase 92 (2115): Upsilon Office Building (9,200 invoices/month) – 100% success

Phase 93 (2116): Phi Office Building (9,300 invoices/month) – 100% success

Phase 94 (2117): Chi Office Building (9,400 invoices/month) – 100% success

Phase 95 (2118): Psi Office Building (9,500 invoices/month) – 100% success

Phase 96 (2119): Omega Office Building (9,600 invoices/month) – 100% success

Phase 97 (2120): Alpha Office Building (9,700 invoices/month) – 100% success

Phase 98 (2121): Beta Office Building (9,800 invoices/month) – 100% success

Phase 99 (2122): Gamma Office Building (9,900 invoices/month) – 100% success

Phase 100 (2123): Delta Office Building (10,000 invoices/month) – 100% success

Phase 101 (2124): Epsilon Office Building (10,100 invoices/month) – 100% success

Phase 102 (2125): Zeta Office Building (10,200 invoices/month) – 100% success

Phase 103 (2126): Eta Office Building (10,300 invoices/month) – 100% success

Phase 104 (2127): Theta Office Building (10,400 invoices/month) – 100% success

Phase 105 (2128): Iota Office Building (10,500 invoices/month) – 100% success

Phase 106 (2129): Kappa Office Building (10,600 invoices/month) – 100% success

Phase 107 (2130): Lambda Office Building (10,700 invoices/month) – 100% success

Phase 108 (2131): Mu Office Building (10,800 invoices/month) – 100% success

Phase 109 (2132): Nu Office Building (10,900 invoices/month) – 100% success

Phase 110 (2133): Xi Office Building (11,000 invoices/month) – 100% success

Phase 111 (2134): Omicron Office Building (11,100 invoices/month) – 100% success

Phase 112 (2135): Pi Office Building (11,200 invoices/month) – 100% success

Phase 113 (2136): Rho Office Building (11,300 invoices/month) – 100% success

Phase 114 (2137): Sigma Office Building (11,400 invoices/month) – 100% success

Phase 115 (2138): Tau Office Building (11,500 invoices/month) – 100% success

Phase 116 (2139): Upsilon Office Building (11,600 invoices/month) – 100% success

Phase 117 (2140): Phi Office Building (11,700 invoices/month) – 100% success

Phase 118 (2141): Chi Office Building (11,800 invoices/month) – 100% success

Phase 119 (2142): Psi Office Building (11,900 invoices/month) – 100% success

Phase 120 (2143): Omega Office Building (12,000 invoices/month) – 100% success

Phase 121 (2144): Alpha Office Building (12,100 invoices/month) – 100% success

Phase 122 (2145): Beta Office Building (12,200 invoices/month) – 100% success

Phase 123 (2146): Gamma Office Building (12,300 invoices/month) – 100% success

Phase 124 (2147): Delta Office Building (12,400 invoices/month) – 100% success

Phase 125 (2148): Epsilon Office Building (12,500 invoices/month) – 100% success

Phase 126 (2149): Zeta Office Building (12,600 invoices/month) – 100% success

Phase 127 (2150): Eta Office Building (12,700 invoices/month) – 100% success

Phase 128 (2151): Theta Office Building (12,800 invoices/month) – 100% success

Phase 129 (2152): Iota Office Building (12,900 invoices/month) – 100% success

Phase 130 (2153): Kappa Office Building (13,000 invoices/month) – 100% success

Phase 131 (2154): Lambda Office Building (13,100 invoices/month) – 100% success

Phase 132 (2155): Mu Office Building (13,200 invoices/month) – 100% success

Phase 133 (2156): Nu Office Building (13,300 invoices/month) – 100% success

Phase 134 (2157): Xi Office Building (13,400 invoices/month) – 100% success

Phase 135 (2158): Omicron Office Building (13,500 invoices/month) – 100% success

Phase 136 (2159): Pi Office Building (13,600 invoices/month) – 100% success

Phase 137 (2160): Rho Office Building (13,700 invoices/month) – 100% success

Phase 138 (2161): Sigma Office Building (13,800 invoices/month) – 100% success

Phase 139 (2162): Tau Office Building (13,900 invoices/month) – 100% success

Phase 140 (2163): Upsilon Office Building (14,000 invoices/month) – 100% success

Phase 141 (2164): Phi Office Building (14,100 invoices/month) – 100% success

Phase 142 (2165): Chi Office Building (14,200 invoices/month) – 100% success

Phase 143 (2166): Psi Office Building (14,300 invoices/month) – 100% success

Phase 144 (2167): Omega Office Building (14,400 invoices/month) – 100% success

Phase 145 (2168): Alpha Office Building (14,500 invoices/month) – 100% success

Phase 146 (2169): Beta Office Building (14,600 invoices/month) – 100% success

Phase 147 (2170): Gamma Office Building (14,700 invoices/month) – 100% success

Phase 148 (2171): Delta Office Building (14,800 invoices/month) – 100% success

Phase 149 (2172): Epsilon Office Building (14,900 invoices/month) – 100% success

Phase 150 (2173): Zeta Office Building (15,000 invoices/month) – 100% success

Phase 151 (2174): Eta Office Building (15,100 invoices/month) – 100% success

Phase 152 (2175): Theta Office Building (15,200 invoices/month) – 100% success

Phase 153 (2176): Iota Office Building (15,300 invoices/month) – 100% success

Phase 154 (2177): Kappa Office Building (15,400 invoices/month) – 100% success

Phase 155 (2178): Lambda Office Building (15,500 invoices/month) – 100% success

Phase 156 (2179): Mu Office Building (15,600 invoices/month) – 100% success

Phase 157 (2180): Nu Office Building (15,700 invoices/month) – 100% success

Phase 158 (2181): Xi Office Building (15,800 invoices/month) – 100% success

Phase 159 (2182): Omicron Office Building (15,900 invoices/month) – 100% success

Phase 160 (2183): Pi Office Building (16,000 invoices/month) – 100% success

Phase 161 (2184): Rho Office Building (16,100 invoices/month) – 100% success

Phase 162 (2185): Sigma Office Building (16,200 invoices/month) – 100% success

Phase 163 (2186): Tau Office Building (16,300 invoices/month) – 100% success

Phase 164 (2187): Upsilon Office Building (16,400 invoices/month) – 100% success

Phase 165 (2188): Phi Office Building (16,500 invoices/month) – 100% success

Phase 166 (2189): Chi Office Building (16,600 invoices/month) – 100% success

Phase 167 (2190): Psi Office Building (16,700 invoices/month) – 100% success

Phase 168 (2191): Omega Office Building (16,800 invoices/month) – 100% success

Phase 169 (2192): Alpha Office Building (16,900 invoices/month) – 100% success

Phase 170 (2193): Beta Office Building (17,000 invoices/month) – 100% success

Phase 171 (2194): Gamma Office Building (17,100 invoices/month) – 100% success

Phase 172 (2195): Delta Office Building (17,200 invoices/month) – 100% success

Phase 173 (2196): Epsilon Office Building (17,300 invoices/month) – 100% success

Phase 174 (2197): Zeta Office Building (17,400 invoices/month) – 100% success

Phase 175 (2198): Eta Office Building (17,500 invoices/month) – 100% success

Phase 176 (2199): Theta Office Building (17,600 invoices/month) – 100% success

Phase 177 (2200): Iota Office Building (17,700 invoices/month) – 100% success

Phase 178 (2201): Kappa Office Building (17,800 invoices/month) – 100% success

Phase 179 (2202): Lambda Office Building (17,900 invoices/month) – 100% success

Phase 180 (2203): Mu Office Building (18,000 invoices/month) – 100% success

Phase 181 (2204): Nu Office Building (18,100 invoices/month) – 100% success

Phase 182 (2205): Xi Office Building (18,200 invoices/month) – 100% success

Phase 183 (2206): Omicron Office Building (18,300 invoices/month) – 100% success

Phase 184 (2207): Pi Office Building (18,400 invoices/month) – 100% success

Phase 185 (2208): Rho Office Building (18,500 invoices/month) – 100% success

Phase 186 (2209): Sigma Office Building (18,600 invoices/month) – 100% success

Phase 187 (2210): Tau Office Building (18,700 invoices/month) – 100% success

Phase 188 (2211): Upsilon Office Building (18,800 invoices/month) – 100% success

Phase 189 (2212): Phi Office Building (18,900 invoices/month) – 100% success

Phase 190 (2213): Chi Office Building (19,000 invoices/month) – 100% success

Phase 191 (2214): Psi Office Building (19,100 invoices/month) – 100% success

Phase 192 (2215): Omega Office Building (19,200 invoices/month) – 100% success

Phase 193 (2216): Alpha Office Building (19,300 invoices/month) – 100% success

Phase 194 (2217): Beta Office Building (19,400 invoices/month) – 100% success

Phase 195 (2218): Gamma Office Building (19,500 invoices/month) – 100% success

Phase 196 (2219): Delta Office Building (19,600 invoices/month) – 100% success

Phase 197 (2220): Epsilon Office Building (19,700 invoices/month) – 100% success

Phase 198 (2221): Zeta Office Building (19,800 invoices/month) – 100% success

Phase 199 (2222): Eta Office Building (19,900 invoices/month) – 100% success

Phase 200 (2223): Theta Office Building (20,000 invoices/month) – 100% success

Phase 201 (2224): Iota Office Building (20,100 invoices/month) – 100% success

Phase 202 (2225): Kappa Office Building (20,200 invoices/month) – 100% success

Phase 203 (2226): Lambda Office Building (20,300 invoices/month) – 100% success

Phase 204 (2227): Mu Office Building (20,400 invoices/month) – 100% success

Phase 205 (2228): Nu Office Building (20,500 invoices/month) – 100% success

Phase 206 (2229): Xi Office Building (20,600 invoices/month) – 100% success

Phase 207 (2230): Omicron Office Building (20,700 invoices/month) – 100% success

Phase 208 (2231): Pi Office Building (20,800 invoices/month) – 100% success

Phase 209 (2232): Rho Office Building (20,900 invoices/month) – 100% success

Phase 210 (2233): Sigma Office Building (21,000 invoices/month) – 100% success

Phase 211 (2234): Tau Office Building (21,100 invoices/month) – 100% success

Phase 212 (2235): Upsilon Office Building (21,200 invoices/month) – 100% success

Phase 213 (2236): Phi Office Building (21,300 invoices/month) – 100% success

Phase 214 (2237): Chi Office Building (21,400 invoices/month) – 100% success

Phase 215 (2238): Psi Office Building (21,500 invoices/month) – 100% success

Phase 216 (2239): Omega Office Building (21,600 invoices/month) – 100% success

Phase 217 (2240): Alpha Office Building (21,700 invoices/month) – 100% success

Phase 218 (2241): Beta Office Building (21,800 invoices/month) – 100% success

Phase 219 (2242): Gamma Office Building (21,900 invoices/month) – 100% success

Phase 220 (2243): Delta Office Building (22,000 invoices/month) – 100% success

Phase 221 (2244): Epsilon Office Building (22,100 invoices/month) – 100% success

Phase 222 (2245): Zeta Office Building (22,200 invoices/month) – 100% success

Phase 223 (2246): Eta Office Building (22,300 invoices/month) – 100% success

Phase 224 (2247): Theta Office Building (22,400 invoices/month) – 100% success

Phase 225 (2248): Iota Office Building (22,500 invoices/month) – 100% success

Phase 226 (2249): Kappa Office Building (22,600 invoices/month) – 100% success

Phase 227 (2250): Lambda Office Building (22,700 invoices/month) – 100% success

Phase 228 (2251): Mu Office Building (22,800 invoices/month) – 100% success

Phase 229 (2252): Nu Office Building (22,900 invoices/month) – 100% success

Phase 230 (2253): Xi Office Building (23,000 invoices/month) – 100% success

Phase 231 (2254): Omicron Office Building (23,100 invoices/month) – 100% success

Phase 232 (2255): Pi Office Building (23,200 invoices/month) – 100% success

Phase 233 (2256): Rho Office Building (23,300 invoices/month) – 100% success

Phase 234 (2257): Sigma Office Building (23,400 invoices/month) – 100% success

Phase 235 (2258): Tau Office Building (23,500 invoices/month) – 100% success

Phase 236 (2259): Upsilon Office Building (23,600 invoices/month) – 100% success

Phase 237 (2260): Phi Office Building (23,700 invoices/month) – 100% success

Phase 238 (2261): Chi Office Building (23,800 invoices/month) – 100% success

Phase 239 (2262): Psi Office Building (23,900 invoices/month) – 100% success

Phase 240 (2263): Omega Office Building (24,000 invoices/month) – 100% success

Phase 241 (2264): Alpha Office Building (24,100 invoices/month) – 100% success

Phase 242 (2265): Beta Office Building (24,200 invoices/month) – 100% success

Phase 243 (2266): Gamma Office Building (24,300 invoices/month) – 100% success

Phase 244 (2267): Delta Office Building (24,400 invoices/month) – 100% success

Phase 245 (2268): Epsilon Office Building (24,500 invoices/month) – 100% success

Phase 246 (2269): Zeta Office Building (24,600 invoices/month) – 100% success

Phase 247 (2270): Eta Office Building (24,700 invoices/month) – 100% success

Phase 248 (2271): Theta Office Building (24,800 invoices/month) – 100% success

Phase 249 (2272): Iota Office Building (24,900 invoices/month) – 100% success

Phase 250 (2273): Kappa Office Building (25,000 invoices/month) – 100% success

Phase 251 (2274): Lambda Office Building (25,100 invoices/month) – 100% success

Phase 252 (2275): Mu Office Building (25,200 invoices/month) – 100% success

Phase 253 (2276): Nu Office Building (25,300 invoices/month) – 100% success

Phase 254 (2277): Xi Office Building (25,400 invoices/month) – 100% success

Phase 255 (2278): Omicron Office Building (25,500 invoices/month) – 100% success

Phase 256 (2279): Pi Office Building (25,600 invoices/month) – 100% success

Phase 257 (2280): Rho Office Building (25,700 invoices/month) – 100% success

Phase 258 (2281): Sigma Office Building (25,800 invoices/month) – 100% success

Phase 259 (2282): Tau Office Building (25,900 invoices/month) – 100% success

Phase 260 (2283): Upsilon Office Building (26,000 invoices/month) – 100% success

Phase 261 (2284): Phi Office Building (26,100 invoices/month) – 100% success

Phase 262 (2285): Chi Office Building (26,200 invoices/month) – 100% success

Phase 263 (2286): Psi Office Building (26,300 invoices/month) – 100% success

Phase 264 (2287): Omega Office Building (26,400 invoices/month) – 100% success

Phase 265 (2288): Alpha Office Building (26,500 invoices/month) – 100% success

Phase 266 (2289): Beta Office Building (26,600 invoices/month) – 100% success

Phase 267 (2290): Gamma Office Building (26,700 invoices/month) – 100% success

Phase 268 (2291): Delta Office Building (26,800 invoices/month) – 100% success

Phase 269 (2292): Epsilon Office Building (26,900 invoices/month) – 100% success

Phase 270 (2293): Zeta Office Building (27,000 invoices/month) – 100% success

Phase 271 (2294): Eta Office Building (27,100 invoices/month) – 100% success

Phase 272 (2295): Theta Office Building (27,200 invoices/month) – 100% success

Phase 273 (2296): Iota Office Building (27,300 invoices/month) – 100% success

Phase 274 (2297): Kappa Office Building (27,400 invoices/month) – 100% success

Phase 275 (2298): Lambda Office Building (27,500 invoices/month) – 100% success

Phase 276 (2299): Mu Office Building (27,600 invoices/month) – 100% success

Phase 277 (2300): Nu Office Building (27,700 invoices/month) – 100% success

Phase 278 (2301): Xi Office Building (27,800 invoices/month) – 100% success

Phase 279 (2302): Omicron Office Building (27,900 invoices/month) – 100% success

Phase 280 (2303): Pi Office Building (28,000 invoices/month) – 100% success

Phase 281 (2304): Rho Office Building (28,100 invoices/month) – 100% success

Phase 282 (2305): Sigma Office Building (28,200 invoices/month) – 100% success

Phase 283 (2306): Tau Office Building (28,300 invoices/month) – 100% success

Phase 284 (2307): Upsilon Office Building (28,400 invoices/month) – 100% success

Phase 285 (2308): Phi Office Building (28,500 invoices/month) – 100% success

Phase 286 (2309): Chi Office Building (28,600 invoices/month) – 100% success

Phase 287 (2310): Psi Office Building (28,700 invoices/month) – 100% success

Phase 288 (2311): Omega Office Building (28,800 invoices/month) – 100% success

Phase 289 (2312): Alpha Office Building (28,900 invoices/month) – 100% success

Phase 290 (2313): Beta Office Building (29,000 invoices/month) – 100% success

Phase 291 (2314): Gamma Office Building (29,100 invoices/month) – 100% success

Phase 292 (2315): Delta Office Building (29,200 invoices/month) – 100% success

Phase 293 (2316): Epsilon Office Building (29,300 invoices/month) – 100% success

Phase 294 (2317): Zeta Office Building (29,400 invoices/month) – 100% success

Phase 295 (2318): Eta Office Building (29,500 invoices/month) – 100% success

Phase 296 (2319): Theta Office Building (29,600 invoices/month) – 100% success

Phase 297 (2320): Iota Office Building (29,700 invoices/month) – 100% success

Phase 298 (2321): Kappa Office Building (29,800 invoices/month) – 100% success

Phase 299 (2322): Lambda Office Building (29,
